

Asazad Amir Pathan

Software Engineer – Full-Stack & AI Integration

+91 9890878387 | Bangalore, India | asazadpathan31@gmail.com | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience building scalable backend microservices, Angular web applications, and Generative AI integrations. Proficient in C#/.NET, Python, FastAPI, and LLM orchestration tools such as Azure OpenAI and LangChain. Proven track record of delivering production summarization features and prototyping RAG architectures to automate enterprise workflows.

CORE COMPETENCIES

Domains: Generative AI Integration, RESTful Microservices, Full-Stack Web Development, Database Tuning
Architectures: Retrieval-Augmented Generation (RAG), Asynchronous Pipelines, Event-Driven Systems, Vector Search

TECHNICAL SKILLS

AI & GenAI: Azure OpenAI, Google Gemini, LangChain, LlamaIndex, RAG Architectures, Vector Search, Prompt Engineering
Backend & Data: .NET Core, C#, Python, FastAPI, RESTful APIs, SQL Server, T-SQL, Entity Framework
Frontend: Angular 16+, TypeScript, JavaScript, RxJS, Reactive Forms, HTML5/CSS3
Cloud & Tools: Azure (AZ-204), Docker, Git, CI/CD, Postman, PyTest

PROFESSIONAL EXPERIENCE

IntegraConnect Bangalore, India
Software Engineer Apr 2024 – Present

- Engineered an LLM medical trip summarization pipeline using Azure OpenAI and .NET Web API, reducing medical trip review time by **60% for 200+ coders**.
- Deployed asynchronous FastAPI microservices utilizing in-memory caching, maintaining response latency under **150ms across 10,000+ daily payload requests**.
- Architected enterprise RAG proofs of concept using LangChain and vector embeddings, achieving **90%+ retrieval accuracy** across 500+ clinical documents.
- Designed dynamic Angular 16+ modules with RxJS data streams, boosting workflow completion efficiency by **35% for end users**.

IntegraConnect Bangalore, India
Programmer Aug 2022 – Mar 2024

- Automated data validation workflows using Angular Reactive Forms and .NET, decreasing invalid backend submissions by **30%**.
- Refactored legacy SQL Server stored procedures and created composite indexes, cutting execution times from **800ms to under 200ms** on critical tables.
- Authored operational Python scripts for routine data processing and system maintenance, saving **10+ engineering hours weekly**.

KEY TECHNICAL PROJECTS

Enterprise Document RAG Pipeline: Constructed a semantic search system using LangChain and Azure OpenAI, serving indexed context with under **2-second query latency**.

Healthcare Claims Denial Risk Classifier: Trained a Scikit-Learn model on 50,000+ claim records to flag potential denial risks with **88% classification accuracy**.

CERTIFICATIONS

Microsoft Certified: Azure Developer Associate (AZ-204) | Microsoft 2023
Agentic AI Expert & Generative AI Essentials | Educative.io 2024 – 2026

EDUCATION

B.Tech in Computer Science and Engineering | Dr. Babasaheb Ambedkar Technological University 2018 – 2022
