

Asazad Amir Pathan

Software Engineer – AI

+91 9890878387 | Bangalore, India | asazadpathan31@gmail.com | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience building Python backend services, Angular web applications, and Generative AI solutions for production environments. Experienced in developing retrieval-augmented generation (RAG) pipelines, integrating LLM APIs, and fine-tuning database queries to support high-throughput applications.

TECHNICAL SKILLS

AI & GenAI: LangChain, LlamaIndex, RAG Systems, Function Calling & Tool Use, Agentic Workflows, Embeddings, Prompt Engineering, Azure OpenAI, Google Gemini, Scikit-Learn
Backend & Data: Python, FastAPI, RESTful API Design, SQL (T-SQL, SQL Server), Vector Databases
Frontend: Angular 16+, TypeScript, JavaScript, RxJS, HTML/CSS
Cloud & Tools: Azure (AZ-204), Docker, Git, CI/CD, Postman, PyTest

PROFESSIONAL EXPERIENCE

IntegraConnect

Software Engineer AI

Bangalore, India

Apr 2024 – Present

- Designed and deployed FastAPI microservices handling 50,000+ daily requests, maintaining 99.99% API uptime.
- Built document processing pipelines using Azure OpenAI and Google Gemini APIs to extract unstructured data into structured JSON formats.
- Developed custom Angular frontend modules to render real-time backend data streams and AI processing outputs.
- Implemented standard caching and asynchronous handling strategies to reduce API latency for background data runs.

IntegraConnect

Associate Software Engineer AI

Bangalore, India

Aug 2022 – Mar 2024

- Built full-stack features using Angular and Python to automate manual data validation routines, lowering input error rates by 25%.
- Optimized legacy SQL Server queries and created composite indexes, cutting average query execution time by 40%.
- Wrote automated Python scripts for routine operational tasks, freeing up core engineering hours for model evaluation and API testing.

KEY TECHNICAL PROJECTS

Enterprise RAG Knowledge Base: Built a semantic search system using LangChain to query enterprise document repositories, serving indexed context to an Azure OpenAI endpoint via FastAPI.

Claims Denial Prediction Engine: Trained a Scikit-Learn classification model to score healthcare claims for potential denial risks, surfacing results directly in an Angular frontend dashboard.

EDUCATION & CERTIFICATIONS

B.Tech in Computer Science and Engineering | Dr. Babasaheb Ambedkar Technological University 2018 – 2022
Agentic AI Expert & Generative AI Essentials | Educative.io 2024 – 2026
Microsoft Certified: Azure Developer Associate (AZ-204) | Microsoft 2023
